Re: Voluntary Remediation Progress (VRP) Report No. 6
Former Automatic Sprinkler Site, HSI #10268
Swainsboro, Emanuel County, GA

Dear Mr. Chute:

The Georgia Environmental Protection Division (EPD) has received the February 23, 2015, *Voluntary Remediation Program Status Report No. 6* (February 2015 Report), that has been submitted pursuant to the Georgia Voluntary Remediation Program Act (the Act) O.C.G.A. 12-8-100, by AMEC on behalf of Scott Technologies, Inc. (STI). After completing its review of the referenced document, EPD has provided the following comments:

- According to the February 2015 Report, STI will continue to focus on additional remediation of the higher impacts onsite in the vicinity of MW-8 and MW-19 at this time, and make the determination of which properties require a Uniform Environmental Covenant (UEC) at the end of the 5-year VRP evaluation period. EPD concurs with the use of additional onsite remediation at this time, including but not limited to additional high vacuum extraction (HVE) events, and justifying the use of UECs for the necessary parcels as part of the VRP Compliance Status Report at the close of the VRP evaluation period.
- Please provide complete sampling information on the field sampling reports (Appendix A) to document the sampling in accordance with the March 2013 USEPA Region 4 SEDS Groundwater Sampling Procedure SEDSPROC-301-R3. All field sampling reports should include total well depth, screen lengths, depth of the pump intake, and the type of materials used during sampling (i.e. Teflon).

Should you have any question or concerns regarding this site, please contact Mr. Kevin Collins of the Response and Remediation Program at (404) 657-8660.

Sincerely,

David Brownlee
Unit Coordinator
Response and Remediation Program
